

TOTAL SOLUTIONS IN POLYMER TECHNOLOGY

Prokol is a company that focuses on developing and manufacturing liquid plastics. It specializes in hot spray products, with pure polyurea being the most important.

The range also includes polyurethane and hybrid hot sprays, as well as a series of special primers and topcoats for these hot spray coatings. The range of products is completed with epoxy and polyurethane floor coatings and self-levelling screeds, as well as wall and ceiling coatings.

In short, Prokol delivers a complete range of products.

Quality and service

In order to guarantee the quality of our finished products, the entire production process is subjected to strict controls from beginning to end. All the Prokol employees work according to a strict quality protocol with the ISO-9002 standard as the guiding principle.

Advise on the correct choice of product

Of course, the correct use of our products plays an important role in the protocol quality. As a manufacturer, we will be pleased to provide assistance and guidance so that you can make the correct product choice. We can also help you and your employees to correctly apply the product by means of training and practical guidance. Prokol will not do the actual work for you.

Customer-orientation

Within the Prokol organization, everybody and everything is orientated towards being of service to you in the most flexible way possible. By combining a good internal organization with the correct development and production environment, we are able to deliver "special, customer-orientated" products alongside our standard products.

If you are looking for a good solution to your needs, then do not hesitate to contact us. We challenge you, so you can challenge us.

TOTAL SOLUTIONS IN POLYMER TECHNOLOGY

Decorative flooring

Floors are playing an increasingly more important role in our environment. Several styles, such as concrete floors, are often mentioned. Prokol offers a number of polyurethane and epoxy self-levelling floor screeds available in virtually every colour (combinations). These floor screeds are used in offices, shops, showrooms and private residences.

Industrial flooring

In addition to numerous other applications, Prokol supplies flooring for warehouses, distribution centres, workshops and printing facilities. These systems often consist of epoxy coatings and are available in virtually every RAL colouring. They are waterproof and hard wearing, and comply with the CUR/PBV requirements.

Parking garages

For this application, Prokol supplies several floor, wall and ceiling solutions. These systems are waterproof and noiseless and do not generate any irritating squeaking sound. By combining several colours and using pictograms, we create human and user-friendly parking garages where visitors feel at ease.

Rooftop car parks

These applications frequently have a double function: driveability and watertightness. For this section Prokol provides standard coating systems in addition to polyurea coating for heavy duty tear-proof systems. The building and detailed engineering of a system are mainly determined by the construction of the foundation and the desired end result. Once again, design and colour are significant to the visitor's perception.

Verandas, balconies and gallery flooring

Balconies, verandas and galleries often are an important part of our residential environment. High-quality finishes and designs are therefore essential to enhance the accommodation satisfaction, while creating the separation seal with the space below. Gallery flooring also requires polishing every so often and Prokol provides several solutions.

Seamless hot-spray systems

You are partial to design freedom and we provide you with the waterproofing and surface finishing. Hot-spray systems effortlessly follow each detail and create a seamless whole. These systems are also used for floor finishing, (roof) sealing and (gable) finishes of buildings, but also as a sealing system for swimming pools, aqua theme parks and secondary containment systems in the industry and petrochemistry.

Areas of expertise

We receive many market queries that cannot be resolved with the standard products. But Prokol will gladly find a solution to these 'problems'. For instance: the fire-resistant roof covering at the Kroller Muller museum, but also the special flooring finishes for the TNO, including VEHILL and the latest crash runway. We also consider the sealing of complex (shapes) BLOB architecture as a challenge.
